# PROJECTS

<https://github.com/olasesi>

<https://ahmedolusesi-portfolio.herokuapp.com/>

## Combined Primary and Secondary School Portal

- Built a full-stack web application for operations for the school owner, headmaster (primary school), Principal (secondary school), Admin officer (admission), Admin officer (Accountant), teacher (primary and secondary school) and students (prospective and returning (primary and secondary)).
- PHP Built custom made website.
- School owner is super admin for all other admins. Owner can begin and end school session/term and also open portal for prospective students. He can ban/log other admins out from his dashboard and can see account details from Admin officer (admission) dashboard and other analytics of both schools.
- Headmaster and Principal can add teachers to prospective classes. They can ban teachers and also set up new subjects.
- Admin officer (admission) can admit students and confirm or edit student details from his dashboard. Admin officer (admission) can query students' admission status.
- Admin officer (accountant) set up school fees for schools and classes, set up other module payments e.g., excursion, school bus payment, etc. for the appropriate school and class. Admin officer (accountant) can query student payment to see for half, 75% or full payment of school fees. Admin officer (accountant) can query previous term part payment.
- Teachers can send assignments/tests to his students and receive them.
- Students can receive assignments and tests and can also submit to his teacher. He can pay the rest of his part payment and other module payment from his dashboard.

## Classified ads website

- A web application for users to post their products and services to get customers for their goods and services.
- PHP built backend and HTML/CSS/Bootstrap made frontend.
- Ajax jQuery powered so users or store owners can quickly get to see people in their locality that needs a product or service they offer.
- Stop-words were filtered out from search.
- Product rating system

## Service sales website with referral system

- Sales website with referral/affiliate marketing system.
- PHP built

<https://www.betasouk.com/>

## Ecommerce website

- A PHP built ecommerce website that has its dashboard/admin still on its frontend.
